Teach-in Guide

Adjustment - wall

No target present - tank empty

Press push-button >3 seconds until LED's are flashing one time per second. The surroundings will be calibrated when the push-button is released during the following 3 seconds

The sensor will calculate a switch-point by itself. No further calibration is needed.

Adjustment - object

Target present - tank full

The self-calculated switch-point can be changed by means of the Teach-in function for "Target present".

Press push-button >6 seconds until LED's are flashing two times per second. The object will be calibrated when the push-button is released during the following 3 seconds

Adjustment - NO - NC

Press push-button >9 sec. until LED's are flashing three times per second. The status of NO-NC will toggle when the push-button is released during the following 3 seconds

Releasing the push-button after 12 sec. returns the sensor to factory settings.
