

S20 SERIES

The **S20** series offers all the basic optic functions at the highest operating distances. The series presents models with 50 cm background suppression with microprocessor-based Teach-in setting or, with trimmer adjustment, 10 m polarised retroreflex, 2 m diffuse proximity and 50 m emitter-receiver optic functions.

Even with particular compact dimensions, these sensors guarantee optimal performances, thanks to special aspherical lenses that take full advantage of the high-power LED emission, visible red in the background suppression and polarised retroreflex versions and infrared in all the other models.

Both NO and NC outputs are present in the NPN or PNP versions. M12 connector is available.

The connection block can be adjusted either in a straight or right angle position, in order to offer improved mounting versatility.

HIGHLIGHTS

- Enhanced emission and special lenses ideal for long operating distances
