## Ultrasonic sensor
UC300-30GM-IUR2-K-V15

Features

- Parameterisation interface for the application-specific adjustment of the sensor setting via the service program ULTRA 2001
- Current and voltage output
- Synchronisation options
- Adjustable acoustic power and sensitivity
- Temperature compensation

Dimensions

Technical data

$C\,C$
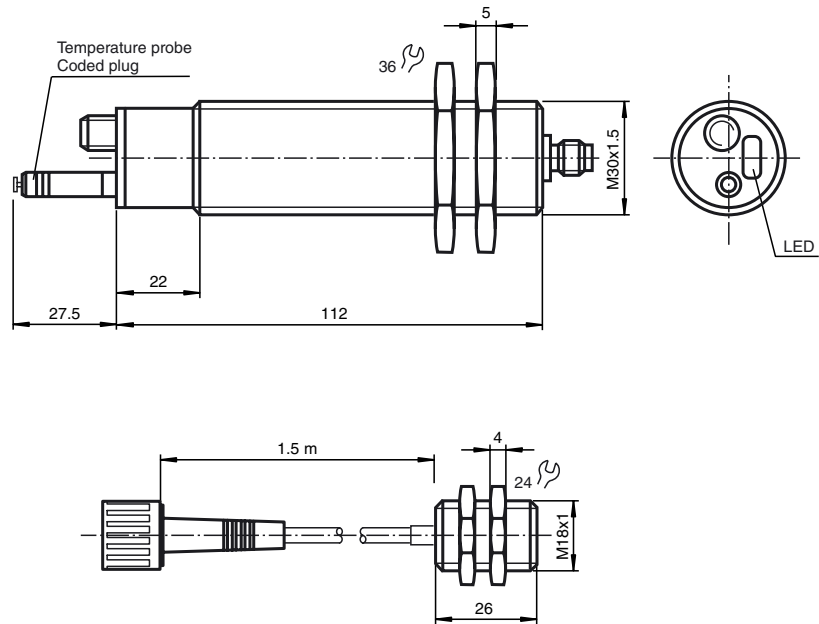

General specifications

Sensing range	30 ... 300 mm
Adjustment range	50 ... 300 mm
Unusable area	0 ... 30 mm
Standard target plate	100 mm x 100 mm
Transducer frequency	approx. 380 kHz
Response delay	21 ms minimum
	63 ms factory setting

Indicators/operating means

LED green	permanent: Power-on
	flashing: Standby mode or TEACH-IN function object detected
LED yellow 1	permanent: object in evaluation range
	flashing: TEACH-IN function
LED yellow 2	permanent: object in detection range
	flashing: TEACH-IN function
LED red	permanent: temperature/TEACH-IN plug not connected
	flashing: fault or TEACH-IN function object not detected
Temperature/TEACH-IN connector	temperature compensation , TEACH-IN for evaluation range , output function setting

Electrical specifications

Operating voltage	10 ... 30 V DC , ripple 10 %$_{SS}$
Power consumption P_0	$\leq$ 900 mW

Interface

Interface type	RS 232, 9600 Bit/s , no parity, 8 data bits, 1 stop bit

Input/Output

Synchronisation	bi-directional
	0 level -U_B...+1 V
	1 level: +4 V...+U_B
	input impedance: > 12 KOhm
	synchronisation pulse: $\geq$ 100 μs, synchronisation interpulse period: $\geq$ 2 ms
Synchronisation frequency	
Common mode operation	$\leq$ 95 Hz
Multiplex operation	$\leq$ 95/n Hz, n = number of sensors

Output

Output type	1 current output 4 ... 20 mA
	1 voltage output 0 ... 10 V
Resolution	evaluation range [mm]/4000, but $\geq$ 0,05 mm
Deviation of the characteristic curve	$\leq$ 0,2 % of full-scale value
Repeat accuracy	$\leq$ 0,1 % of full-scale value
Load impedance	current output: $\leq$ 500 Ohm
	Voltage output: $\geq$ 1000 Ohm
Temperature influence	$\leq$ 2 % from full-scale value (with temperature compensation)
	$\leq$ 0.2 %/K (without temperature compensation)

Standard conformity

Standards	EN 60947-5-2

Ambient conditions

Ambient temperature	-25 ... 70 °C (248 ... 343 K)
Storage temperature	-40 ... 85 °C (233 ... 358 K)

Mechanical specifications

Protection degree	sensor head: IP67
	connector sensor head/controller unit: IP52
Connection	connector V15 (M12 x 1), 5 pin
Material	
Housing	stainless steel 1.4303
	plastic parts PBT
Transducer	epoxy resin/hollow glass sphere mixture; polyurethane foam
Mass	260 g

Electrical connection

Standard symbol/Connection:
(version IU)

Core colours in accordance with EN 60947-5-2.

Connector V15

Subject to reasonable modifications due to technical advances.   Printed in Germany

UC300-30GM-IUR2-K-V15

Description of the sensor functions

This ultrasonic sensor features a four-pole temperature/TEACH-IN plug, that can be connected in four different positions. These have the following significance.

Plug position	Meaning
A1	TEACH-IN evaluation limit A1
A2	TEACH-IN evaluation limit A2
E2/E3	Rising/falling ramp/output characteristic of the voltage output by zero point
T	Temperature compensation

Description of the TEACH-IN procedure

TEACH-IN the evaluation limits 1 or 2
- Cut supply voltage
- Remove TEACH-IN plug
- Restore supply voltage (Reset)
- Set object to desired switching point
- Connect TEACH-IN plug in pos. A1 or A2. This teaches the evaluation limits A1 or A2.
- The TEACH-IN procedure is controlled with the LED. The green LED flashes, when object is detected, the red LED flashes when no object is detected.
- Connect TEACH-IN plug in pos. T. This completes the TEACH-IN procedure and saves the distance.
- The sensor works in normal mode

TEACH-IN the analogue function
- Cut supply voltage
- Remove TEACH-IN plug
- Restore supply voltage (Reset)
- Connect TEACH-IN plug in pos. E2/E3. By multiple plugging, three different modes of operation can be set in cyclical sequence:
  1) rising ramp, LED A2 flashes,
  2) falling ramp, LED A1 flashes,
  3) zero line, LED A1 and A2 flash
- Connect TEACH-IN plug in pos. T. This completes the TEACH-IN procedure and saves the mode of operation.
- The sensor works in normal mode

Synchronisation

The sensor features a synchronisation input for the suppression of mutual interference.. If this input is not used, the sensor will operate using an internally generated clock rate. It can be synchronised by applying a square wave voltage. A falling edge leads to the transmission of a single ultrasonic pulse. A low level ≥ 1 s or an open synchronisation input will result in the normal operation of the sensor. A high level > 1 s will result in the standby mode of the sensor (indicator green LED). Synchronisation cannot be performed during TEACH-IN and vice versa.

Multiple operating modes are possible:
1. Two to five sensors can be synchronised by interconnecting their synchronisation inputs. In this case, the sensors alternately transmit ultrasonic pulses.
2. Multiple sensors can be controlled by the same synchronisation signal. The sensors are synchronised.
3. The synchronisation pulses are sent cyclically to individual sensors. The sensors operate in multiplex mode.
4. A high level at the synchronisation input disables the sensor.

The response time increases when the sensor is synchronised, because the synchronisation increases the measurement cycle time.

Note:

If the option for synchronisation is not used, the synchronisation input has to be connected to ground (0V) or the sensor has to be operated via a V1 cable connector (4-pin).
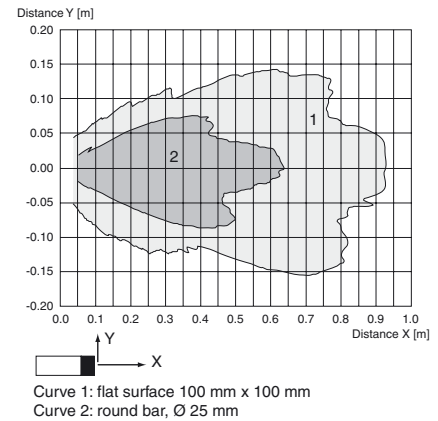

Default setting

A1:	unusable area
A2:	nominal sensing range
Mode of operation:	rising ramp

Characteristic curves/additional information

Characteristic response curve

Curve 1: flat surface 100 mm x 100 mm
Curve 2: round bar, Ø 25 mm

Programmed analogue output function

Subject to reasonable modifications due to technical advances.   Printed in Germany

Note on communication with the UC-30GM-R2 interface cable

The UC-30GM-R2 interface cable allows for communication with the ultrasonic sensor using the ULTRA 2001 service program. The cable creates a connection between the PC-internal RS 232 interface and the plug-in connection for the temperature/program plug on the sensor. When setting up the connection on the sensor, make certain the plug is lined up correctly; otherwise no communication will be possible. The protrusion of the round plug must be inserted into the groove of the plug connection on the sensor side and **not** into the arrow symbol on the sensor.

Adjustable parameter with the service program ULTRA 2001
- Evaluation limits A1 and A2
- Rising/falling ramp/zero line
- Mode of operation
- Sonic speed
- Temperature offset (The inherent temperature-rise of the sensor can be considered in the temperature compensation)
- Expansion of the unusable area (for suppression of unusable area echoes)
- Reduction of the detection range (for suppression of remote range echoes)
- Time of measuring cycle
- Acoustic power (interference of the burst duration)
- Sensitivity
- Behaviour of the sensor in case of echo loss
- Behaviour of the sensor in case of a fault
- Average formation via an allowed number of measuring cycles
- Selection of the parameter set, RS 232 or manually.
