Through-beam ultrasonic barrier
UBE500-18GK-SE0-V1

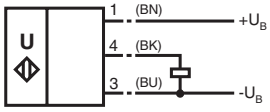
Features

- High switching frequency
- Small, compact design
- Plastic housing
- Suited for applications for detection and counting of transparent objects (e.g. bottles and plastic-wrapping)
- Emitter and receiver included in the delivery package

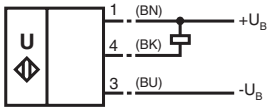
Electrical connection

Standard symbol / Connection:

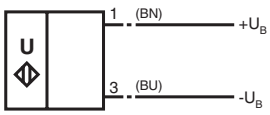
Receiver E2:



Receiver E0:



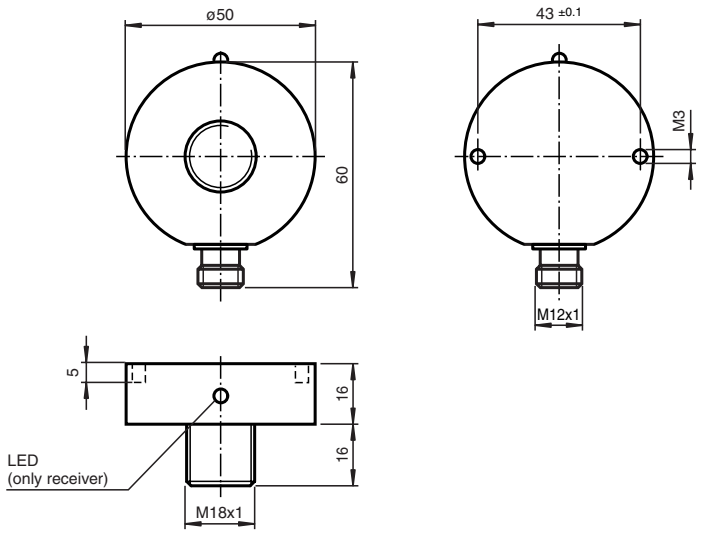
Emitter:



Core colours in accordance with EN 60947-5-2.

Connector V1

Dimensions



CE

Technical data

General specifications	
Sensing range	0 ... 500 mm , distance emitter-receiver 15 mm ... 500 mm
Transducer frequency	400 kHz
Indicators/operating means	
LED yellow	indication of the switching state (receiver)
Electrical specifications	
Operating voltage	18 ... 30 V DC , ripple 10 $\%_{SS}$
No-load supply current I_0	20 mA receiver 25 mA emitter
Output	
Output type	1 switch output E0, npn NO
Rated operational current I_e	200 mA
Voltage drop U_d	≤ 1,5 V
Switching frequency f	100 Hz
Standard conformity	
Standards	EN 60947-5-2
Ambient conditions	
Ambient temperature	0 ... 60 °C (273 ... 333 K)
Storage temperature	-40 ... 85 °C (233 ... 358 K)
Mechanical specifications	
Protection degree	IP65
Connection	V1 connector (M12 x 1), 4-pin
Material	
Housing	Polyamide (PA)
Mass	50 g

Notes

Function

A through-beam ultrasonic barrier always consists of a single emitter and a single receiver. The function of a through-beam ultrasonic barrier is based in the interruption of the sound transmission to the receiver by the object to be detected.
The emitter sends an ultrasonic signal that is evaluated by the receiver. If the signal is interrupted or muted by the object to be detected, the receiver switches.
No electrical connections are required between the emitter and receiver.
The function of through-beam ultrasonic barriers is not dependent on the position of their installation. We recommend, however, to install the emitter below in the case of vertical installations to prevent the accumulation of dust particles.

Installation tolerances

The installation tolerances of the central axes of the emitter and receiver may not exceed the values specified in the illustration.

Detection of thin foils

For the detection of thin foils (< 0.1 mm), install the through-beam ultrasonic barrier at an angle of ≥ 10° from perpendicular to the foil.

Caution

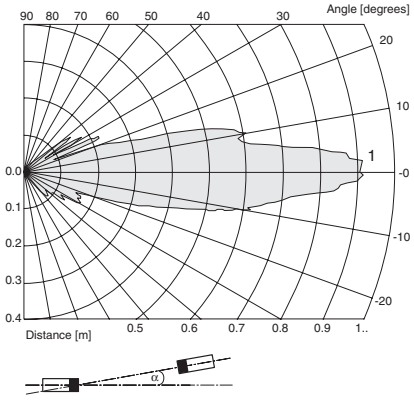
Mount or replace emitter and receiver only in pairs. Both devices are optimally matched to each other by the manufacturer.

Model number

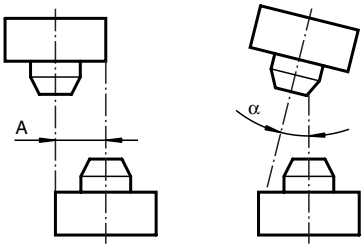
UBE500-18GK-SE0-V1

Characteristic curves/additional information

Characteristic response curves



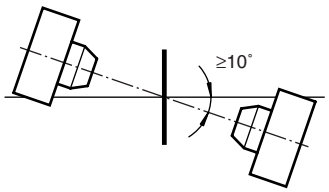
Mounting/Adjustment



Parallel displacement
A ≤ 8 mm

Angle displacement
α ≤ 5°

Thin foil detection



Accessories

Cable sockets *)

V1-G-2M-PVC
V1-W-2M-PVC

*) For additional cable sockets see section „Accessories“.
